NICHITA CEBOTARI

GAMEPLAY ENGINEER

A Gameplay Engineer with a strong inclination for Technical Art, bridging the gap between code and visual fidelity. Expert in Unity (C#) with a rapidly growing proficiency in Unreal Engine 5. Passionate about creating intuitive tools that empower design and art teams to iterate faster.

SELECTED PROJECTS

Procedural Parisian Cityscape | Solo Developer - A custom editor tool for generating organic city layouts, designed for non-grid-based city builders.

- Engineered a "City Planner" algorithm using Voronoi diagrams and other algorithms to generate organic street layouts.
- Developed a custom **Editor Interface** with non-destructive scene-view handles, allowing designers to manipulate building footprints in real-time.
- Implemented **procedural mesh generation** logic to create watertight roofs on arbitrary N-gon shapes.

Modular Tower Defense | Solo Developer - A technical showcase focusing on decoupled architecture and data-driven game balance.

- Implemented the **Observer Pattern** to fully decouple the UI, Economy, and Wave systems.
- Engineered a **Strategy Pattern** for projectiles, allowing runtime hot-swapping of behaviors.
- Created a **Designer-First data system** using ScriptableObjects, enabling complex wave configuration without code modification.

The Tale of Aomsveen | Lead Architectural Engineer - A client-directed horror game based on Dutch folklore, developed in strict Agile sprints.

- Led **technical development** in a client-based environment, managing the Git branching strategy and conducting code reviews.
- Architected a **complex AI entity** using a Finite State Machine (FSM) with volumetric line-of-sight and auditory sensors.

Urban Alley (Unreal Engine 5) | Technical Artist - A deep-dive transition project mastering the core pillars of UE5 rendering and modular systems.

- Engineered a comprehensive Master Material ("Uber-Shader") supporting vertex painting for puddles, moss, and surface variation.
- Developed a modular Niagara VFX system to simulate atmospheric weather effects and environmental interaction.

SKILLS

Engines & Languages

- Unity 6 - Expert
- Unreal Engine 5 - Intermediate
- C# - Expert
- C++/HLSL - Basic

Technical Design & Art

- Procedural Generation
- Finite State Machines
- Custom Editor Tools
- Shader & VFX Graphs

Tools & Production

- Git (CLI, LFS) & Azure DevOps
- Agile/Scrum Leadership
- Visual Studio
