NICHITA CEBOTARI

GAMEPLAY ENGINEER

A Gameplay Engineer with a strong inclination for Technical Art, bridging the gap between code and visual fidelity. Advanced in Unity (C#) and Unreal Engine 5 (Blueprints). Passionate about creating intuitive tools and scalable systems that empower design and art teams to iterate faster.

PROFESSIONAL EXPERIENCE

Saxion XR Lab | UE5 Technical Artist & VR Engineer Intern
Enschede, NL | Feb 2026 – Jul 2026

- **ICover (Client: Ministry of Defence of the Netherlands)** | Developed environmental VFX and atmospheric post-processing (Niagara) to drive visual immersion in a VR military training simulation. Managed the full Xsens motion capture pipeline, from recording live actors to cleaning and integrating final character animations in-engine.
- **Quantum Delta (Client: University of Twente Labs)** | Engineered a high-fidelity VR liquid and chemistry simulation using UE5 Blueprints, Shaders, and Niagara. Developed custom math-driven fluid physics to handle realistic pouring, absolute volume tracking, and real-time chemical reactions.

SELECTED PROJECTS

Procedural Parisian Cityscape (Unity 6) | Solo Developer - A custom editor tool for generating organic city layouts, designed for non-grid-based city builders.

- Engineered a "City Planner" algorithm using Voronoi diagrams and other algorithms to generate organic street layouts.
- Developed a custom Editor Interface with non-destructive scene-view handles, allowing designers to manipulate building footprints in real-time.
- Implemented procedural mesh generation logic to create watertight roofs on arbitrary N-gon shapes.

Urban Alley (Unreal Engine 5) | Technical Artist - A detailed diorama project focusing on atmosphere, lighting, and environmental storytelling.

- **Material Pipeline:** Engineered a Master Material supporting vertex painting for puddles and moss, adding narrative detail to the environment.
- **Dynamic Environment:** Developed a modular Niagara VFX system to simulate atmospheric weather effects and environmental interaction.

SKILLS

Engines & Languages

- Unreal Engine - Advanced
- Unity 6 - Advanced
- C# - Advanced
- C++/HLSL - Basic

Technical Design & Art

- VR Development (Meta Q3)
- Motion Capture (Xsens)
- Shader & VFX Creation
- Data-Driven Architecture
- Custom Editor Tools

Tools & Production

- Git (+LFS) & Azure DevOps
- Jira / Agile / Scrum

PORTFOLIO

EDUCATION

B.Sc. Creative Media and Game Technology - Saxion University of Applied Sciences
Enschede, NL | 2023 – Present

- Specialization: Engineer
- Expected Graduation: 2027
